

# SP LUCE

A STYLISH DESIGN THAT ENHANCES THE PRODUCT

SP 1 LUCE

SP 2 LUCE

SP LUCE model gives **maximum importance to your product**, thanks to the double system of LED lights that illuminate the upper and lower part of the tank.

## Features

### Double system of LED lights

The bowl of SP LUCE is illuminated by LED lights, giving the equipment an even more attractive look. LED lights illuminate the tank from above and below, enhancing the product, increasing its visibility and promoting impulse purchases.

### I-Tank® insulated bowl

Thanks to the unique bowl patented by SPM, energy consumption is reduced and the product reaches the set consistency much more quickly. The insulated bowl also improves the look of the equipment by reducing condensation on the sides of the bowl.

### Hybrid control of consistency

Exclusively patented by SPM. The integrated software allows the equipment to self-adjust to ensure that the product always has the same consistency, from the first to the last drop dispensed.

### BPA-free bowl

The BPA-free bowl has several advantages including higher resistance to impact, greater transparency, better thermal and chemical resistance, and total absence of bisphenol A.

### Green GAS

R290 (propane) refrigerant gas will be used in all of our equipment, in compliance with European and environmental regulations.

### A new design, increased ergonomics

The new style gives SP LUCE a modern, attractive look, while the new screw for adjusting product hardness makes changing the settings easier and quicker.

### Control also in defrost mode

Product quality is maintained also in DEFROST mode. A sensor allows the temperature to be controlled, thus avoiding sudden fluctuations that would degrade the product and compromise the final result.

# SP LUCE

## A STYLISH DESIGN THAT ENHANCES THE PRODUCT

SP LUCE is a compact countertop machine that dispenses **cold creams, sorbets** and other creamy specialties. It works with **water or milk-based powdered preparations or ready-made mixes in cartons** to be poured directly into the bowl.

SP LUCE comes in **one or two bowl versions** that operate independently.

**Easy to use and clean**, all parts that come in contact with the product can be disassembled without using any tools.

SP LUCE also offers a significant ROI due to its **high overrun**.

### EXCLUSIVE PATENTS

These include the **I-Tank® insulated bowl** and the innovative **hybrid control** of the product consistency.

### LEADERS IN SAFETY

Thanks to the **new BPA-free material** of the tank, free of Bisphenol A.

### FOCUSING ON THE FINAL PRODUCT

The **focus is on the final product**, which is why SP range has adopted various standards to **ensure its quality and wholesomeness**: such as hybrid consistency control, and the sensor that controls the temperature also in defrost mode.

### PRACTICALITY AND SIMPLICITY

The **new design of the screw** for adjusting the consistency of the product **makes it much easier to use this equipment**, which is already user-friendly..

### RESPECT FOR THE ENVIRONMENT

To protect the planet, all of our equipment uses the **natural refrigerant, R290** (propane).

### A CLEAN, MODERN LOOK

The **sleek design** and **LED lights** render SP LUCE appealing and eye-catching.
